

2026 NBA Draft Big Board

22 Players · Ranked by Connective Value, Scalability & Playoff Impact

Colin Murray · colin-m11.github.io · Draft Night — June 23, 2026

Ranked by connective value and scalability — not empty counting stats. The players who matter in the playoffs defend, move the ball, and make the team around them better. BPM, DBPM, and TS% are the primary anchors; usage rate is a key input. All per-36 stats from Tankathon. Rankings and analysis are my own.

— TIER 1 —

#1 Cameron Boozar

PF · Duke · 6'9.5" 253lbs · Wingspan 7'1.5" · 18 yrs

Ceiling: All-NBA · **Floor:** High-Impact Starter

#1 by the slimmest margin. BPM 18.7, historically elite for 18. Real shared usage (29.9%), positive both ends (OBPM 12.7, DBPM 6.0). Size/shooting/IQ fits any roster. Edges Dybantsa and Peterson on floor certainty and two-way polish — not ceiling.

24.2	11.0	4.4	0.7	1.5	18.7	65.3%	29.9%	6.0

#2 Darryn Peterson

SG/PG · Kansas · 6'5.75" 199lbs · Wingspan 6'9.75" · 19 yrs

Ceiling: Superstar · **Floor:** Starter

Has a case for #1. Highest usage in top 4 (33.5%), BPM 14.1 under the load. Elite off-dribble creation. TS% 57.8% improves with better teammates. Connective playmaking is real and scalable. Lands #2 on floor certainty behind Boozar, not talent.

Ceiling: Superstar · **Floor:** Starter

Consensus #1 in most mocks. Led nation at 25.5 PPG. 6'10" wing — size makes the load more scalable than a guard doing the same. BPM 11.7 (lowest of this tier); DBPM 2.2 is where development sits. Franchise two-way wing ceiling if defense develops.

Ceiling: High-Impact Starter · Floor: Role Player

22.4 PTS and 5.8 AST/36. TS% 57.7% at 31.4% USG is where efficiency questions sit. DBPM 1.7 middling. High-impact starter ceiling if both improve.

Ceiling: High-Impact Starter · Floor: Role Player

BPM 8.4 at 29% USG against SEC competition. TS% 53.4% — below-average efficiency at that usage. DBPM 3.3 solid. Physical profile worth a lottery pick; offensive efficiency is the ceiling question.

Ceiling: High-Impact Starter · Floor: Role Player

Elite profile (6'7.75", 6'10" wingspan). BPM 10.5, TS% 63.6%, DBPM 3.6. Jump shot is a genuine liability — defenses dare him to shoot. Combine: one scrimmage game, slow release off catch.

#22 Allen Graves

PF · Santa Clara · 6'7.75" 226lbs · Wingspan 7'0" · Freshman · Selected #19 (Toronto)

Ceiling: High-Impact Starter · Floor: Role Player

The analytics darling — Tankathon #21, BPM 13.4, TS% 61.5%, 41.6% from 3, 2.5 A/TO. Grew up as a PG then hit a late growth spurt: explains the feel, passing instincts, and connective value uncommon at 6'8". 1.9 STL/g defensive activity. Mid-major (Santa Clara) competition is the real knock. Raptors got him #19 — right where this board targeted.
